### CHEMISTRY PRACTICE PROBLEMS

Rules:

1. Positive ion is first...it is usually a single element except  $\text{NH}_4^+$  (ammonium)
2. Negative ion is second. If it is a single element, the ending is change to *-ide*
3. Negative polyatomic atomic ions end in *-ate* or *-ite*  
(You need to check the ions list in text to determine charge and ending)
4. Compound is electrically neutral: positive and negative charges must be balanced!
